It currently consists of 144 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.  * Disserved.* 1159: contig of 1159 bp in length as preserved.  * 1160 2363: contig of 1241 bp in length apport contig of 1241 bp in length apport contig of 1241 bp in length apport contig of 1848 bp in length apport unknown length apport unknown length apport contig of 1858 bp in length apport contig of 1858 bp in length apport contig of 1855 bp in length apport contig of 1855 bp in length apport contig of 2046 bp in length apport contig of 2046 bp in length apport contig of 2046 bp in length apport contig of 2046 bp in length apport contig of 2046 bp in length apport contig of 2046 bp in length apport contig of 2046 bp in length apport contig of 1863 bp in length apport contig of 1863 bp in length apport contig of 1863 bp in length apport contig of 1863 bp in length apport contig of 1863 bp in length apport unknown length apport unk

LOCUS AC020833 62274 bp DNA HTG 16-FEB-2000 DEFINITION MUS MUSCULUS CLONE RG-MBAC_40H2, LOW-PASS SEQUENCE SAMPLING. AC020833		REFERENCE 2 (bases 1 to 62274) AUTHORS DOE Joint Genome Institute.	JOURNAL SUBmitted (10-JAN-2000) Production Sequencing Facility, DOE Joint Genome Institute, 2800 Mitchell Drive, Walnut Creek, CA 94598, USA COMMENT * NOTE: This record contains 69 individual	* sequencing reads that have not been  * contigs. Runs of N are used to sepa	<pre>and the older in which they appear is completely     * arbitrary. Low-pass sequences sampling is useful for     * identifying clones that may be gene-rich and allows</pre>	* overlap relationships among clones to be deduced. * However, it should not be assumed that this clone	sequenced to completion. In is updated, the accessived.	1 296: contig of 296 bp	1049: contig or gap of un	* 1050 1812: Contrig Or /05 Dp in length  * app of unknown length  * 1813 2420: Contrix of Kns ha in length	gap of unknown le	gap of unknown 3645: contiq of 692 by	gap of unknown 1 4766: contig of 1121	unknown of 530 bg	* 5297 5584: contigo of 288 bp in length * 5297 5584: contigo of 288 bp in length *	6454: contig of gap of un	6853; contig of 399 by gap of unknown	* 6854 /566; Contig of /13 bp in length  * 7567 8253; Contig of 687 bp in length	gap of unknown 9058: contiq of 805 b	gap of unknown contig of 620	gap of unknown 10272: contig of 594 b	unknown of 618	unknown of 805 by	ot unknown ig of 982 b	* 12678 13130: contig of 453 bp in length	* 13131 13878: contig the bring headth	* 13879 14026: Sorting of 148 bp in length * app of unknown length

The H. influenzae sequence has been updated by R. Fleischmann. New
database matches have been assigned, product names have been
improved, and a number of frame shifts have been corrected. We
gratefully acknowledge the work of Tatusov et. al. We have
incorporated their annotation into the /notes fields of the
corresponding H. influenzae genes

Direct Submission

N. Submitted (28-MAY-1998) The Institute for Genomic Research, 9712

Medical Center Dr. Rockville, MD 20850, USA

The whole genome was shifted by 588 nucleotides for a new start

On Oct 1, 1996 this sequence version replaced gi:1222062.

Novel Escherichia bacterium having enhanced L-threonine resistance due to enhanced RhtC protein activity, used to produce L-threonine, L-homoserine, L-valine and L-leucine -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Aleshin VV, Belareva AV, Tokhmakova IL;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             L-threonine at a concentration at which the corresponding wild-type strain would not grow. Since the transformed bacteria can grow on the minimal medium, it can synthesise L-threonine, which accumulates. The accumulated amino acids can then be removed from the culture medium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              bacterium of the present invention may also be used to synthesise pmoserine, L-valine and L-leucine at increased levels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Escherichia coli. This sequence may be used to impart L-threonine resistance on E. coli bacteria, which would be useful for producing a high yield of L-threonine. L-threonine resistance means that the bacteria will be able to grow on a minimal medium containing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is the L-threonine resistance gene, rhtC, from

```
The present sequence is the yahN gene (an excretion protein gene) of Escherichia coli. The amino acid excretion protein produced from this gene is involved in the production of amino acids, and an increase in its expression leads to an increased accumulation of amino acids in the cell. In this case, an increase in lysine, glutamic acid and proline is achieved if multiple copies of the gene are transfected into a bacterium. The bacterium used is E. coli.
                                                                                                                                                                                                                                                                                                                                                                                                                       production of L-amino acids by an Escherichia bacterium increasing the expression amount of an L-amino acid excretion
                                                                                                                                                                                                                                                                       Ψ,

The amino acid excretion protein produced from this gene is involved in the production of amino acids, and an increase in its expression leads to an increase decumulation of amino acids in the cell. In this case, an increase in lysine, alamine, valine, histidine, isolaucine, glutamic acid and proline is achieved if multiple copies of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Increased production of L-amino acids by an Escherichia bacterium comprises increasing the expression amount of an L-amino acid excretion

Sequences A61501-A61524 represent nucleotide sequences encoding
Agrobacterium vitis hypersensitivity response (HR) elicitor proteins
(B1630-B1688). The HR is a rapid, localised necrosis that is
(B1630-B1688). The HR is a rapid, localised necrosis that is
cubically second to be a rapid and element of the pathogenic organism interacts with a nonhost plant (i.e. one in which intracellular bacterial growth and disease development do not occur). Like other HR elicitors, the A. vitis elicitor functions in non-host plants by causing a rapid hypersensitive response that results in alling-off and killing of the pathogen. On grape plants, the A. vitis HR elicitor induces a restricted necrosis of tissues, resulting in the death of plant cells and induction of pathogen resistence. A. vitis HR elicitor proteins, in non-infectious form, are used to treat plants or their seeds to impart resistence to disease, such as those caused by fundy, bacteria or viruses; and to enhance growth, e.g., to increase yield or to provide earlier germination or maturation. The proteins can also be used to cold, and to impart resistence to environmental stresses, e.g., cold, and to impart nesistence to environmental stresses, e.g., cold, and to impart nesistence to environmental stresses, e.g., cold, and to impart per encodes A. vitis HR elicitor proteins. Use of A. vitis HR elicitor proteins, or nucleic acids encoding them, may allow control of previously untreatable diseases; provide systemic treatment; and encodes and encodes and encodes and encodes and encodes and encodes and encodes and encodes and elicitor proteins, may allow control of previously untreatable diseases; provide systemic treatment; and eliminate the need for biological control agents or polluting New protein from Agrobacterium vitis, useful e.g. for imparting resistance to disease or stress to plants, is involved in production of a hypersensitive response Claim 7; Page 82; 157pp; English.

Sequences A61501-A61524 represent nucleotide sequences encoding
Agrobacterium vitis hypersensitivity response (HR) elicitor proteins
(B1630-B1688). The HR is a rapid, localised necrosis that is
(B1630-B1688). The HR is a rapid, localised necrosis that is
consisted with the active defence of plants against many pathogens, and
cocurs when a pathogenic organism interacts with a nonhost plant (i.e.
one in which intracellular bacterial growth and disease development do
not occur). Like other HR elicitors, the A. vitis elicitor functions in
non-host plants by causing a rapid hypersensitive response that results
on non-host plants by causing a rapid hypersensitive response that results
in non-like other HR elicitors, the A. vitis elicitor function of pathogen resistance. A. vitis HR elicitor
of plant cells and induction of pathogen resistance. A. vitis HR elicitor
proteins, in non-infectious form, are used to treat plants or their seeds
to impart resistance to disease, such as those caused by fungi, bacteria
or viruses; and to enhance growth, e.g., to increase yield or to provide
control insects, to impart resistance to environmental stresses, e.g.,
cold, and to improve nutritional value, e.g., altered oil content. The
same effects can be produced by producing transgenic plants or seeds by
control insects can be produced by producing transgenic plants or seeds
incorporation of DNA that encodes A. vitis HR elicitor proteins. Use of
control of previously untreatable diseases; provide systemic treatment;
control of previously untreatable diseases; provide systemic treatment;
                                                                                                       of
                                                                          New protein from Agrobacterium vitis, useful e.g. for imparting resistance to disease or stress to plants, is involved in production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      eliminate the need for biological control agents or polluting

Novel RhtB protein, useful for generation of L-homoserine resistance in Escherichia bacteria and large-scale production of e.g. L-homoserine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This is the DNA sequence the novel rhtB gene of Escherichia coli Kr-12. The rhtB gene maps at 86 min on the B. coli chromosome. The gene participates in resistance to homoserine. Amplification of the gene results in an improvement of the amino acid productivity of E. coli. The invention provides: the RhtB protein (see Y7928); DNA encoding the RhtB, especially nucleotides 557-1171 of the present sequence; a bacterium, especially of the genus Escherichia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /*tag= a //*tag= a //note= "a DNA sequence corresponding to the coding region (minus the stop codon) is specifically claimed in Claim 3"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1296 TATTCTGACCAATGGTCTCAATCCGAAGACGTCGATTTTCGTGATCAGTC 1345

copy number or increasing the expression rate of the rhtB DNA, the DNA being carried on a multicopy vector or on a transposon; and a method for producing an amino acid by cultivating the bacterium in a culture medium to produce and accumulate the amino acid in the medium, from which it is recovered. The method is used for the production of L-homoserine, L-alanine, L-isoleucine, L-valine or L-threonine (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              886

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         97
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        851
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           933
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    190
```

```
The present sequence is the L-homoserine resistance gene, rhtB, from Escherichia coli. This sequence may be used to impart L-homoserine resistance on E. coll bacteria, which would be useful for producing a high yield of L-homoserine. L-homoserine resistance means that the bacteria will be able to grow on a minimal medium containing L-homoserine at a concentration at which the corresponding wild-type strain would not grow. Since the transformed bacteria can grow on the minimal medium, it can synthesise L-homoserine, which accumulates. The accumulated amino acids can then be removed from the culture medium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel Escherichia bacterium having enhanced L-threonine resistance due to enhanced RhtC protein activity, used to produce L-threonine, L-homoserine, L-valine and L-leucine -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Tokhmakova IL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The bacterium of the present invention may also be used to synthesise L-threonine, L-valine and L-leucine at increased levels.

```
Novel gene encoding marine mela from Shewanella - useful as selectable marker in genetic engineering and for inducing larval
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The 5' end of an open reading frame (T06767) was identified directly downstream of the Shewanella colwelliana melA gene (T06766), and was designated m19A (mel-linked gene). The role of the encoded protein (R87527) was unclear as deletion subcloning in E. coli demonstrated that only melA was required
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  278 GTCGCCAGTATGATGATGTATCCACAACTCTTCGATATTTTAAAATG 327

The invention relates to MelA proteins from marine bacterium of the genus Shewanella, Vibrio or Hyphomonas. The MelA protein is active in catalysing production of melanin synthesis, as well as components of marine exopolysaccharides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                marine bacterium; melanin synthesis; marine exopolysaccharide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           173
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This DNA, isolated from Corynebacterium glutamicum, contains the LysG, LysE and ORF3 genes. LysG and LysE encode a lysine transport regulatory protein and an export protein. Respectively. Microbial production of amino acids (A) is improved by increasing the export-carrier activity and/or the export gene expression in a microorganism that produces (A). The method is specifically used to increase production of lysine, used as an animal feed additive. Other (A) are variously useful as pharmaceuticals, condiments and intermediates for fine chemicals. This method increases the amount of (A) secreted into the culture medium. Export of (A) has been found to depend on a single gene.

NB. This sequence has been created from the information given in table 2
                                                                                                                                                                                                    LysG; LysE; ORF3; lysine transport; regulatory protein; export protein; Microbial production; amino acid; animal feed additive; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Increasing microbial production of amino acids, especially lysine by improving export carrier activity or corresponding gene expression, also new export and regulatory genes from
                                                                                                                                                    DNA encoding LysG, LysE and ORF3 from Corynebacterium glutamicum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 MetLeuMetLeuPheLeuThrValAlaMetValHisIleValAlaLeuMe 17

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Key
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is the yggA gene (an excretion protein gene) of Escherichia coil. The amino acid excretion protein produced from this gene is involved in the production of amino acids, and an increase in its expression leads to an increased accumulation of amino acids in the cell. In this case, an increase in arginine, glutamic acid and lysine is achieved if multiple copies of the gene are transfected into a bacterium. The bacterium used is E. coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Increased production of L-amino acids by an Escherichia bacterium comprises increasing the expression amount of an L-amino acid excretion
                                                                                                                                                                                                                                                                                                                                                                           Troshin PV;

                           The present sequence is the yflK gene (an excretion protein gene) of Escherichia coli. The amino acid excretion protein produced from this gene is involved in the production of amino acids, and an increase in its expression leads to an increased accumulation of amino acids in the cell. In this case, an increase in threonine, histidine, glutamic acid and proline is achieved if multiple copies of the gene are transfected into a bacterium. The bacterium used is E. coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        130 leTyrPheGlySerValPheSerLeuPheValGlyAspAsnValGlyThr 146

factors (NDF's). The pertides encoded by these CDNA clones isolated from human tissues and cell lines, possess the ability to stimulate human pl8-neu tyrosine phosphorylation. These peptides have the ability to induce a differentiated phenotype in certain cell lines and can stimulate or inhibit proliferation of certain cell lines. The NDF's can be used to treat vounds, tumours derived from epithelial tissue of the breast, stomach etc., gastrointestinal disease, Barrett's ossophagus, (non-)oystic kidney disease or inflammatory bowel disease. These cDNA sequences may be used in a recombinant plasmid for the recombinant production of the NDF's in a pro- or eukaryotic host cell.

```
represent the human ORFX open reading frames 1 to 3161. The ORFX represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; sequences have activities such as: cytostatic; hepatotropic; vulnerary; antiporvalatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; antiporvalant; antipartic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coaquiant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID). AIDS. viral, bacterial or fungal infection, malaria, autoimmune catiliage damage, nocturnal haemoglobinuria, antianiamatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                             Novel nucleic acids and peptides derived from open reading frame X, useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       114 erPheLeuLysGlyLeuLeuThrAsnLeuAlaAsnProLysAlaIleIle 130

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention decribes novel human nucleic acid sequences from tumor breast tissue which have cytostatic activity. The nucleic acid sequences can be used to produce and isolate full-length gene sequences. They can be used to express proteins, which can be used as tools to find an activity against breast cancer. The sequences can be used in sense or antisense form. They are especially useful for medicaments for gene therapy to treat breast cancer. 233611-248617 represents expressed sequence tags described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Rosentahl A;

Application US/08395246C

Patent No. 577314

GENERAL INFORMATION:
APPLICANT: Peery, Robert B.
APPLICANT: Skatrud, Paul L.
TITLE OF INVENTION: MULTIPLE DRUG RESISTANCE GENE OF TITLE OF INVENTION: ASPERGILLUS FLAVUS
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSEE: Eli Lilly and Company
STREET: Lilly Corporate Center
CITY: Indianapolis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3 MetLeuPheLeuThrValAlaMetValHisIleValAlaLeuMetSerPr 19

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

chromosome II of Rhodobacter sphaeroides (Choudhary et al., 1994. Journal of Bacteriology, 176:7694-7702). The cosmids were then digested with a variety of restriction enzymes (BamHI, EcoRI, BgILI, PSII, ECORY, NoI and DNASEI) and restriction fragments subcloned into the respective multiple cloning site sites of phluescript SK (-). Note BgILI fragments were subcloned into the pBluescript bamHI site. DNASEI fragments were subcloned into the EcoRV site. All subclones were transformed into E. coli XLIBlue MRF'. All fragments were then sequenced and the sequences where possible were assembled using the GCG program GELASSEMBLE.
